

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A combination of a golf club head and a weight member, comprising:

a golf club head including a ~~recession~~ recess ~~in-proximate~~ a sole thereof, the ~~recession~~ recess having an opening;

a weight member mounted in the ~~recession~~ recess of the golf club head; and

a vibration-absorbable filling material ~~mounted~~ filled in the recess ~~recession~~ of the golf club head, the vibration-absorbable filling material ~~and~~ sealing the opening of the ~~recession~~ recess, the vibration-absorbable filling material burying and fixing the weight member, the vibration-absorbable filling material being made of a light material selected from a group consisting of resins, high molecular polymer materials, rubber, thermoplastic elastomers, polyurethane elastomeric filling materials, carbon fibers, light alloys, and adhesive composite powders thereof.

2. (Cancelled)

3. (Cancelled)

4. (Currently Amended) The combination of a golf club head and a weight member as claimed in claim 1, wherein a plurality of

grooves are defined in a perimeter wall delimiting the ~~recession~~
recess and located adjacent to the opening of the
~~recession~~recess, the grooves improving bonding reliability of the
filling material.

5. (Currently Amended) The combination of a golf club head
and a weight member as claimed in claim 1, wherein the opening of
the ~~recession~~recess faces upward.

6. (Currently Amended) The combination of a golf club head
and a weight member as claimed in claim 1, wherein the opening of
the ~~recession~~recess faces rearward.

7. (Currently Amended) The combination of a golf club head
and a weight member as claimed in claim 1, wherein the opening of
the ~~recession~~recess faces downward.

8. (Original) The combination of a golf club head and a
weight member as claimed in claim 1, wherein the golf club head
is a club head of an iron club.

9. (Original) The combination of a golf club head and a
weight member as claimed in claim 1, wherein the golf club head
is a club head of a wooden club.

10. (Currently Amended) The combination of a golf club head and a weight member as claimed in claim 1, wherein the vibration-absorbable filling material fills the opening of the ~~recession~~recess by ~~means of~~ one of heat pressing and injection molding to bury and fix the weight member in the ~~recession~~recess.

11. (New) The combination of a golf club head and a weight member as claimed in claim 4, wherein the plurality of grooves fail to encircle the perimeter wall.

12. (New) The combination of a golf club head and a weight member as claimed in claim 1, wherein a weight member is mounted in the recess of the golf club head via the opening and the weight member has an end in contact with the recess.

13. (New) The combination of a golf club head and a weight member as claimed in claim 1, the vibration-absorbable filling material seals the opening of the recess such that the weight member is irremovable and sandwiched in between the recess and the vibration-absorbable filling material.
